

Patent Claims

1. A device for cross-platform and data-specific
visualization of 3D data records by means of
5 visualization software for display on a 2D monitor,
characterized in that the 3D volume data are stored
together with visualization software on a data carrier,
and the latter is transmitted to a user for play back
on any desired PC.
- 10 2. The device as claimed in claim 1, characterized in
that the visualization parameters are also stored on
the data carrier in an at least partially unchangeable
fashion.
- 15 3. The device as claimed in claim 2, characterized in
that the data carrier is a CD.
